

I have been told that my child needs an AAC system?

Augmentative and Alternative Communication – What is it?

Why hasn't anyone ever talked to me about this?

Won't using signs and pictures stop my child learning to talk?

We tried and AAC failed – should I try again? How can I make it work well?

I can help my child have something to say.

Augmentative and Alternative Communication (AAC) Workshop for Parents at EarlyEd

Augmentative and Alternative Communication (AAC) can be used to help children who have difficulties with speaking to communicate. Your child's speech pathologist may suggest an AAC system if your child's speech is slow to develop or non-existent or to enhance existing speech. It includes a range of methods such as visuals, signs and computer technologies.

EarlyEd's AAC workshop is ideal for families to learn:

- How to support your child to communicate if they are having real difficulties learning to talk?
- When and where to start with an AAC system?
- How to know what AAC system to use?

This will be a practical session that will introduce you to different AAC systems including PODD, Proloquo2go and Key Word Sign and answer your individual questions.

Early intervention for children with disability

WHEN:

Monday 12 November 12:30–2:30pm

WHERE:

Playtime Hall, Pendle Hill Baptist Church, 52 Pendle Way, Pendle Hill

Bookings essential.
